

PRODUCT CASE STUDY

A quieter timer.

Ember is a pomodoro timer for a small, repeatable rhythm: focus, break, return.

A project by kartenlabs
ember.kartenlabs.com

01 · THE BRIEF

A small brief. A clear direction.

-
- 01 Focus, short breaks, and long breaks with adjustable lengths.
 - 02 A choice of gentle completion chimes, with a way to preview them.
 - 03 A minimal, calm, pixel-inspired interface with an ambient station.

Source: repository design brief. No interviews or usability study are claimed.

02 · THE IDENTITY

Three modes. One visual language.

FOCUS
#E8A64C

SHORT BREAK
#86A87F

LONG BREAK
#C97558

A warm ink background and cream type hold the interface together. Accent colors indicate the active mode. Pixel type carries time; plain language carries meaning.

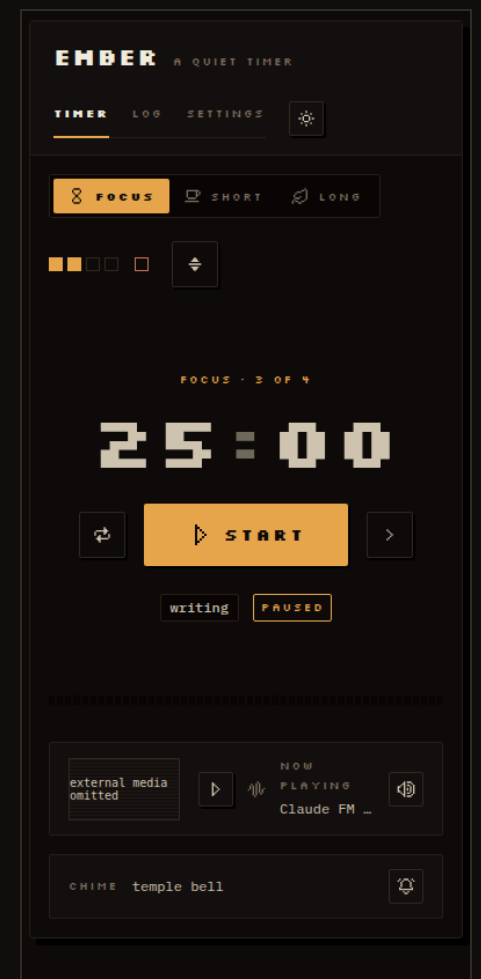

03 · THE EXPERIENCE

Make the next action obvious.

01 Start, pause, reset, and skip sit beside the countdown.

02 A completion handoff offers the next block without forcing a start.

03 Night and Daylight themes share the same visual structure.

AMBIENT STATION

A soundtrack beside the clock.

An optional ambient station makes Ember a place to settle into a session, alongside its timing and break controls.

Currently featuring Claude FM

Music for thinking and building · by Claude · via YouTube

The station is a third-party embed and can change. No audio is hosted by Ember. Concentration benefits have not been measured. No affiliation or endorsement is claimed.

04 · THE ENGINEERING

A clock that remembers.

- 01 A stored deadline determines the time remaining when a tab returns.
- 02 Active blocks keep their original duration, start time, and label.
- 03 Validated local storage restores sessions. Calendar arithmetic handles daylight-saving changes.

Implementation: `Next.js`, `React`, `TypeScript`, `CSS custom properties`.

05 · VALIDATION

Checked in code. Ready to learn.

15

unit tests

05

browser scenarios

The recorded implementation check covered reload recovery, keyboard access, auto-start, midnight rollover, and layouts from 320px to desktop.

Snapshot: repository review on 8 September 2026. Automated checks describe implementation coverage, not user outcomes. Third-party playback is excluded.

06 · REFLECTION

A working product, with room to grow.

NOW A responsive timer, configurable flow and sounds, two themes, and a local session log.

NEXT Observe real sessions, test audio behavior across devices, and evaluate multi-tab coordination and data export.

No adoption, conversion, retention, or time-saving metrics are claimed.
